

Response switching in the picture-matching paradigm

Brandon Waldon and Judith Degen

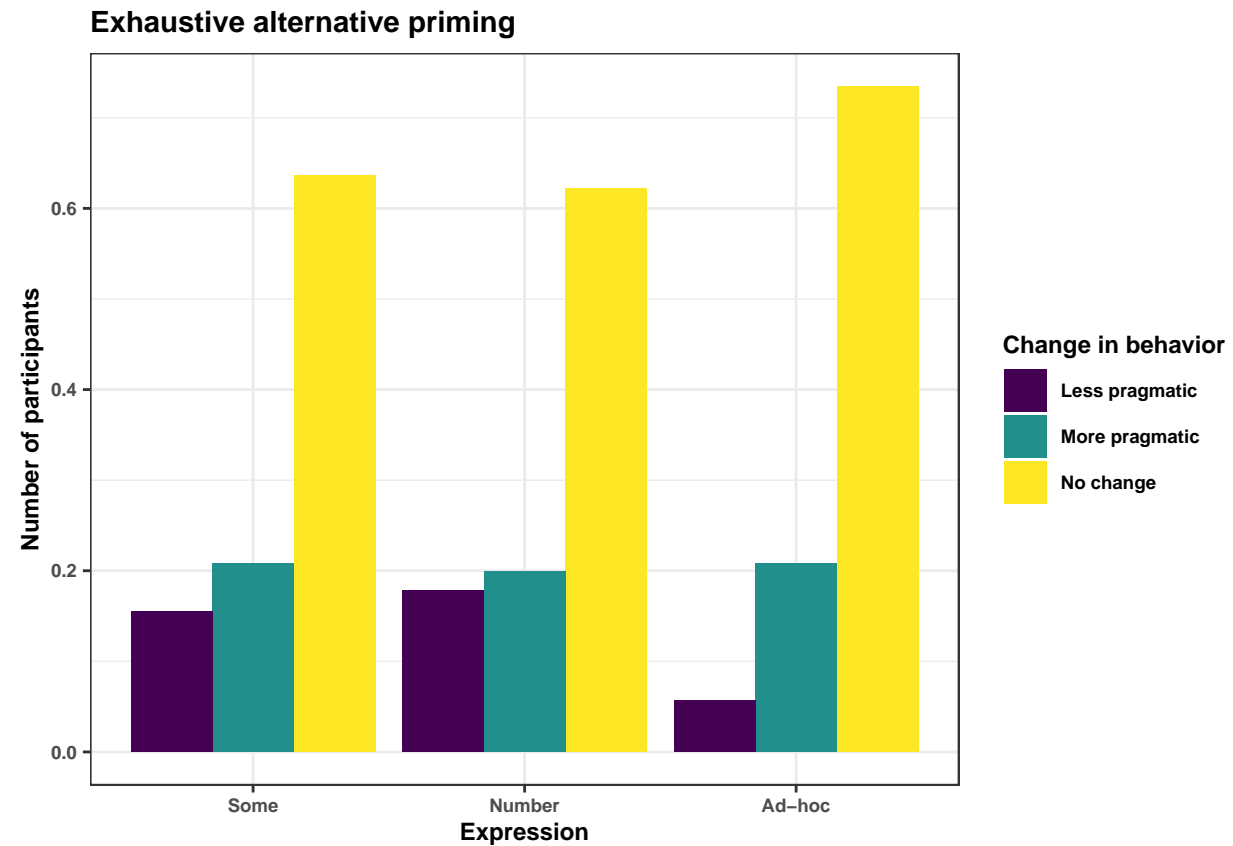

5/29/2020

This document supplements Waldon & Degen (2020): **Symmetric alternatives and semantic uncertainty modulate scalar inference** (Proceedings of Cog Sci).

Exhaustive alternative priming

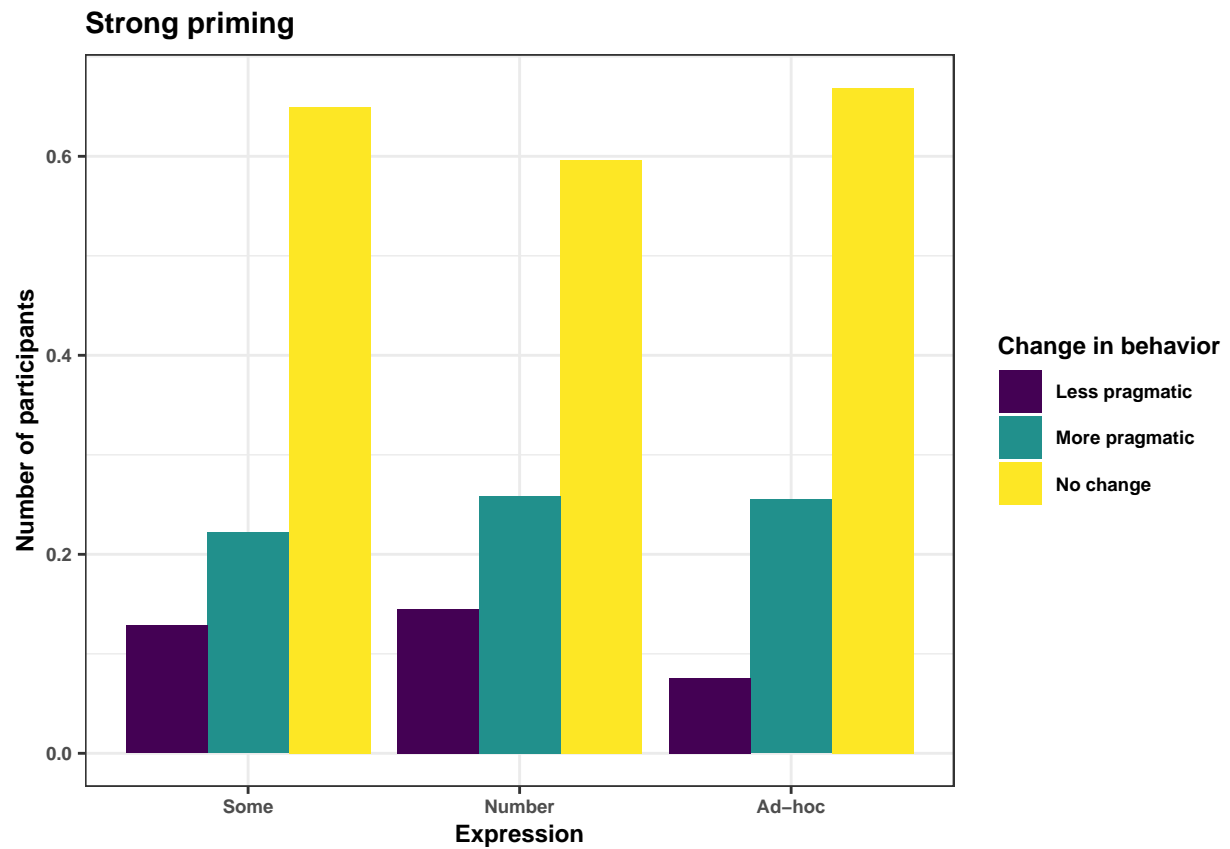

Overall proportions of participants who exhibit higher, lower or equal “Better Picture?” selections from exhaustive priming (relative to Baseline):

```
## # A tibble: 1 x 3
##   morePrag lessPrag noChange
##   <dbl>     <dbl>    <dbl>
## 1    0.205    0.130    0.665
```

Strong priming

```
## # A tibble: 1 x 3
##   morePrag lessPrag noChange
##   <dbl>     <dbl>    <dbl>
## 1    0.246    0.119    0.636
```

Weak priming

```
## # A tibble: 1 x 3
##   morePrag lessPrag noChange
##   <dbl>     <dbl>     <dbl>
## 1  0.0598  0.311  0.629
```
